

## PROCOAT – WELL SHELTERED IN A ROUGH AND UNCOMFORTABLE ENVIRONMENT!

*PROCOAT is an innovative dust and weatherproof protection for the FARO Laser Scanner Photon which protects the housing as well as the most important optic units reliably against a rough environment.*

If the Laser Scanner is used outdoor during rough weather conditions like at quarries, tunnels and mines etc. it is recommended to protect the scanner against falling rocks, dust, rain, etc.

Additionally, ProCoat protects the Laser Scanner in contaminated areas such as in the nuclear or petrochemical industry. ProCoat thereby serves as a 'raincoat' and at the same time as a 'hard hat'. The closed scanner is safely protected against dust and splash water and can even be left on the tripod. The open laser scanner can be used during scanning operation without restrictions. It is possible to use the digital camera, which is necessary for the Colour Option.

When the laser scanner is closed, a metal housing protects the middle section. In order to open the ProCoat, the handle has to be folded aside so that the protective cover can swing open. The carrier handle allows a secure and comfortable transport of the scanning system.
